

Exercise 9-2

Client

9-2 Establish server-client connection and control server using messages:

- Open **Server** project and then **Server_solution.vi** on the neighbour computer (or ask your colleague to do so with completed **Server_exercise.vi**). Set port value to **23**. Run the Server and note the IP
- Open **Client** project and then **Client.vi**. Set port and IP of the server (Fig. 1)
- Run the program and check connection on Connection LED in both applications and in Status Display of the server
- Write a few characters in **Message** control and click **Send message** button. Check the Status Display of the server.
- Send messages from Tab 1 of Exercise 9-1.2 to remotely operate **Action LED**
